

IT INFRASTRUCTURE & TECHNOLOGY CONSULTING

IT Infrastructure Business Solutions

Independent advice. Right-sized architecture.

Advising enterprises, institutions, public-sector organizations and mission-critical environments on the technology infrastructure they should build — and how it should fit together.

OUR ROLE

More than products. We advise on the whole solution.

Modern technology environments are no longer built around isolated systems. Networks, servers, security, surveillance, communication, data and operational systems increasingly need to work together.

Aeon Tech Solutions works as a technology consultant across these layers — assessing what is in place, defining what the requirement actually calls for, and specifying how the parts should work together before anything is procured.

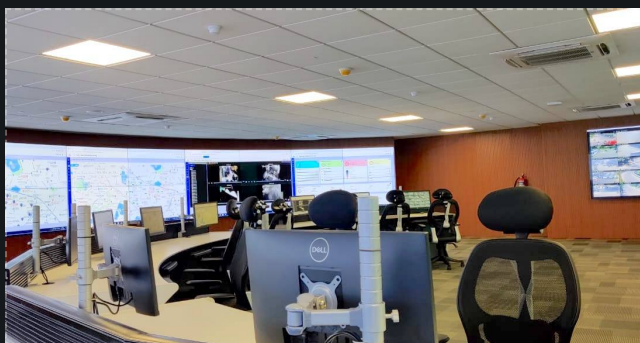

Five Technology Pillars

01

01	IT Hardware	Servers · Workstations · Storage · Network hardware · Computing infrastructure · Peripherals · Rack infrastructure · Enterprise hardware
02	Networking & Connectivity	LAN / WAN · Structured networking · Fibre connectivity · Switches · Routers · Wireless infrastructure · Network architecture
03	Security Systems	Cybersecurity infrastructure · Network security · Firewalls · Access control · CCTV · Security monitoring · Data protection
04	Data & Computing	Data centres · Servers · Storage · Backup · Virtualization environments · Disaster recovery infrastructure
05	Integration Design & Advisory	Command & control centres · Integrated monitoring · AV / video walls · Communication systems · Smart city · Traffic systems · E-governance

Mission-critical Environments

02

Command & Control Centres

Video wall, camera feeds, maps, network status, communication and operator positions, all behaving as one environment.

Data Centre & Computing

Racks, structured cabling, storage, UPS and power, cooling, monitoring and access control, specified together as one build.

Key Business Domains

03

01 Data Centre & Computing Infrastructure

03 Surveillance & Security

05 Smart City & Smart Infrastructure

07 E-Governance

09 E-Education & E-Health

11 Sewage & Waste Management

02 Networking & Telecommunication

04 Command & Control Centres

06 Traffic Management Systems

08 Mobility & Transportation

10 Smart Utilities

How We Engage

04

The architecture is drawn from the operating requirement, not from a product catalogue, and not from whatever a vendor is selling.

01

Understand

The customer's requirement, operating environment and objectives.

02

Assess

Infrastructure, technology requirements and integration challenges.

03

Design

Develop an appropriate technology architecture.

04

Integrate

Coordinate hardware, software, networks and specialist technologies.

05

Deploy

Support implementation, testing and commissioning.

06

Support

Post-deployment support and maintenance as applicable.

Have an IT infrastructure project?

Let's design the right technology ecosystem for your requirement. If an RFP, BOQ or specification exists, send it with your enquiry.
